

FRANCIS FLOWER PRODUCT MATRIX

PRODUCT	DESCRIPTION & APPLICATIONS	BRAND	SALES CONTACT
Recycled white marble powder	<p>Exceptionally white, pure calcium carbonate fillers and extenders used in a range of applications, particularly when whiteness is of paramount importance.</p> <p>Used in formulations requiring either elevated brightness or high chemical purity, such as coatings, sealants, adhesives and plastic applications.</p>	Fordacal	Simon Nocivelli simonn@francisflower.co.uk +44 (0) 7580 033538
White dolomite powder	<p>Used to produce a range of exceptionally white, pure magnesium carbonate fillers and extenders.</p> <p>Low iron content, and strictly controlled particle size, make products suitable for applications requiring raw material purity and a high level of whiteness, such as the glass, construction and paint industries.</p>	Flowdol	Simon Nocivelli simonn@francisflower.co.uk +44 (0) 7580 033538
Ground Granulated Blastfurnace Slag (GGBS)	<p>GGBS is made from a by-product of iron manufacturing and is a high quality, environmentally friendly, low CO₂ material for use in the production of ready-mix and pre-cast concrete.</p> <p>GGBS can replace over 70% of the Portland Cement content in a concrete mix.</p>		Steve Handscomb stevh@francisflower.co.uk +44 (0) 7793 242884
Anhydrite	<p>Anhydrite has many building chemistry applications including as an additive in cement and speciality cements to control set time and enhance mechanical strength, as well as in the manufacture of aerated concrete blocks.</p> <p>Anhydrite is also a valuable source of calcium and sulphur in fertiliser production and can be used as a mineral filler.</p>	Andricite	<p>Graham Goodall grahamg@francisflower.co.uk +44 (0) 7774 250480</p> <p>Carrie-Ann Snelson Carrieanns@francisflower.co.uk +44 (0) 7889 810044</p>
Anhydrite binder	<p>Anhydrite binder manufactured to CE certified standards. Anhydrite binder is the primary ingredient in pumpable self-smoothing floor screeds. It is a cost effective and environmentally friendly alternative to traditional, labour intensive sand cement screeds.</p>	Gypsol	Paul Pepper paulp@francisflower.co.uk +44 (0) 7581 151045
Granulated limestone flour	<p>For agricultural, forestry and horticultural use, to balance soil pH and deliver essential nutrients to crops and grassland. Made from fine limestone flour combined with a water-soluble organic binder in granules of between 2-5mm in diameter.</p> <p>Range includes Calcifert Lime, Calcifert Sulphur and Calcifert Mag.</p>	Calcifert	Carrie-Ann Snelson Carrieanns@francisflower.co.uk +44 (0) 7889 810044
Limestone filler	<p>Limestone filler with a minimum Calcium Carbonate (CaCO₃) content of 70%, a maximum moisture content of 1%, and a bulk density of between 0.5 and 0.9 Mg/m³ in line with CE requirements.</p> <p>Filler is made from either excess filler from asphalt plants, virgin limestone produced at Wicken in Cambridgeshire, Shap in Cumbria, and Gurney Slade in Somerset, or a careful balance of the two. Applications include high quality asphalt filler.</p>		Carrie-Ann Snelson Carrieanns@francisflower.co.uk +44 (0) 7889 810044
